

The synchronic lift allows the moving of a complete construction

*Particle board press in Sebes- Rumania
Lifting out of the pit and moving sideways of 14 segments at the same time,
weight 480tons. Use of 8 synchronic lifts*

Moving on tracks with step less transitions in longitudinal as well as transverse direction possible

Various lifting gear offers maximum flexibility

From planning to realization – comprehensive solutions even for the most difficult tasks

To extend a particle board press, it was necessary to move the complete press. First lift it of the pit, move it sideways and load it onto a self-propelled trailer. This gives way for the extension
